

USE TAPE HERE TO SEAL

Location: The hair sample should be taken from the neck region as illustrated.
Length: Cut as close to the body as possible. Use clean stainless steel scissors. The length of the hair should not exceed 5cm. Retain the proximal(root) portion and discard any excess hair. The freshly grown hair reflects the most recent metabolic activity.
Sample details: Clean and untreated hair is recommended. Chemical treatments can alter trace element levels.
Amount: 1/4gram or one loose tablespoon of hair is required for an accurate Hair Tissue Mineral Analysis

PATIENT DETAILS

NAME

AGE Male Female

ANIMAL

Note: Cut hair sample from neck in several locations as indicated above. Follow the directions on the reverse side of this envelope to obtain a representative hair tissue sample. Thinning scissors may be used on short hair.
